Work Experience

Senior DevOps Engineer

TrendexOne | Aug 2025 – Apr 2026

- Architect and maintain scalable, highly available AWS infrastructure supporting production and staging environments for web3 applications.
- Design and manage containerized workloads using AWS ECS and Kubernetes (EKS), including cluster provisioning, deployment strategies, and lifecycle management.
- Implement Infrastructure-as-Code using Terraform, ensuring reproducible, version-controlled, and modular infrastructure across environments.
- Operate core AWS services including RDS (PostgreSQL), DocumentDB, ElastiCache (Redis), Lambda, IAM, and VPC networking, ensuring performance, security, and reliability.
- Build and optimize Docker-based microservices architecture, improving deployment consistency and system scalability.
- Implement observability solutions using CloudWatch, Prometheus, and Grafana, enabling proactive monitoring, alerting, and faster incident resolution.
- Improve system reliability and uptime through automation, health checks, and incident response processes.
- Collaborate cross-functionally with engineering teams to optimize CI/CD pipelines, deployment workflows, and application performance.

Senior Devops Engineer

2VMODULES | NOV 2024 - present
part-time

- Architect and maintain scalable, secure infrastructure solutions supporting multiple software projects across cloud environments.
- Design and develop reusable Infrastructure-as-Code modules using Terraform and Terragrunt, enabling standardized, automated, and maintainable deployments.
- Lead DevOps best practices adoption, including infrastructure design patterns, CI/CD optimization, and environment standardization.
- Conduct code and infrastructure reviews, ensuring high-quality, secure, and production-ready implementations.
- Improve developer productivity by streamlining deployment workflows, automating infrastructure provisioning, and reducing operational overhead.

Education

Master's Degree in Computing machines, complexes, systems and networks

NPUA | 2016-2018 | graduated with honor

Bachelor Degree in Computing machines, complexes, systems and networks

NPUA | 2012-2016 | graduated with honor

Studied Cisco technology

YSU | Apr 2018- May 2018

Certificate

ACA & DISQO | TRAINING + INTERSHIP DEVOPS PROGRAM

Langugage skills

- Armenian: Mother language
- Russian: Advanced
- English: B1

Military service

Served in RA Armed Forces | July 2018-July 2020

Up to lance Sergeant

Skill & Expertise

- Linux
- Docker
- AWS
- Google Cloud
- Git
- GitLab CI/CD
- GitHub Actions
- Practice of scripting with Bash and Python
- Terraform
- Terragrunt
- Kubeflow
- Kubernetes

Devops Engineer(middle)

UCRAFT | NOV 2023 - Jul 2025
full-time

- Configure Docker images for various services, ensuring optimal performance, security, and scalability.
- Implement best practices for containerization, including image layering, resource allocation, and network isolation
- Develop and manage tools to facilitate local testing and debugging of microservices for developers.
- Implement automation scripts and utilities to streamline the deployment and testing process, enhancing developer productivity.
- Work extensively with Kubernetes to orchestrate containerized applications, managing clusters and deploying microservices.
- Configure Kubernetes resources such as pods, deployments, services, and persistent volumes to meet application requirements.
- Configure GitHub Actions workflows to automate CI/CD pipelines for software delivery.
- Integrate testing, building, and deployment processes into GitHub Actions pipelines, ensuring code quality and deployment reliability.

Devops Engineer

UNUM | FEB 2023 - SEP 2023
full-time

- Proficient and use of AWS services
- Docker containerize applications and deploy them in production environments efficiently.
- Configure GitHub Actions to automate CI/CD pipelines and ensure seamless code integration.
- Configuring and managing local metal servers to optimize performance and ensure robustness(mellanox, nvidia GPU-s, etc..)

Cloud Engineer

Ucom | Jan 2022 - OCT 2023
full-time

- Identify and implement the most optimal cloud-based solutions for the company
- Managing cloud environments in accordance with company security guidelines
- Managed cPanel installations and configurations, enabling efficient website and server management for thousands of customers
- Orchestrated CloudStack environments, handling compute, storage, and network resources to support multiple cloud offerings
- Collaborated with development teams to integrate HostBill billing and automation software with cloud services, enabling seamless billing and customer management

- Conan
- Find and solve difficult tasks
- Installing and maintaining computer
- Operating Systems (Windows,Linux)
- Network Technology
- Infiniband networks
- ArgoCD
- Nginx web server
- Bind9
- Grafana/Prometheus/Loki
- Victoria Metrics
- N8N
- AI agents(claude,cursor)
- Cloudflare

Network and system administrator

Ucom | Sep 2020 - Jan 2022

- Configure and routinely upgrade software and hardware for end-users
- Computer systems and networks maintenance
- Configuring vlans on switches

IT Specialist

INGO ARMENIA CJSC | June 2017-June 2018

- Configure and routinely upgrade software and hardware for end-users
- Active Directory
- Computer systems and networks maintenance

IT technical specialist

Partner Systems | July 2016 - May 2017

- Monitor the company-wide system and make adjustments to ensure rapid triple user base
- Complete repairs or submit replacement orders for equipment that wasn't performing at capacity
